A REUNERT GROUP COMPANY

# Go greener, and pay less.

**Did you know?** Thanks to recent regulatory changes, you can now buy electricity from a body other than Eskom.

Apollo Africa sources and secures sustainable energy from the best renewable energy projects to supply your business so that you can maximise energy savings and certifiably reduce your carbon footprint.

**Green Energy.**

**Certified**  
green coverage

**Maximised**  
cost savings

**Procured**  
by experts

Our Green Energy effectively reduces your business's Scope 2 emissions, helping you meet ESG targets and improve investor ratings. We provide substantial Green Coverage certified with International Renewable Energy Certificates (IRECS).

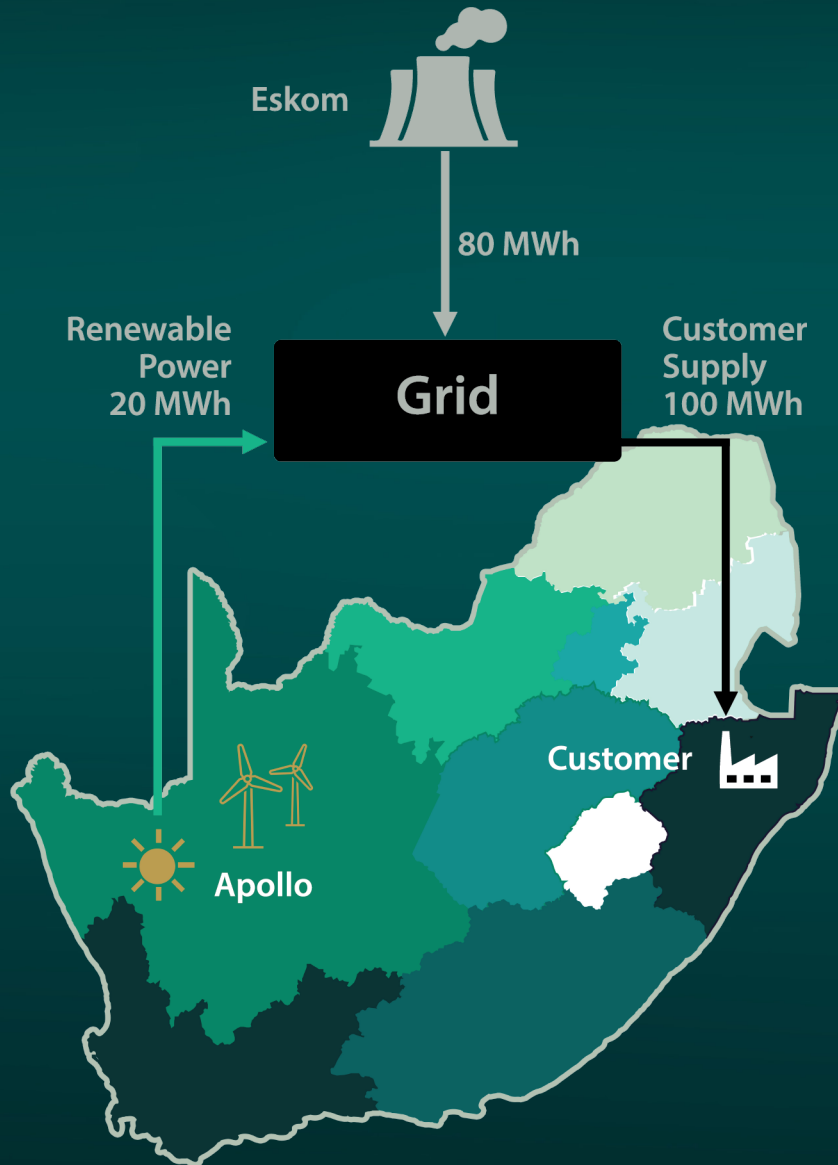

We will always offer lower than Eskom tariffs at controlled escalation rates, allowing your business to maximise savings. Securing your future energy supply volume assists in shielding your business from the uncertainty of future electricity price hikes.

The deep technical expertise of our in-house industry experts ensures a rigorous procurement process. Our relationships with the highest quality renewable projects deliver a wide supply pool and sustain our market leading volume guarantees.

**Expertly sourced, seamlessly delivered.**

## How we do it.

Renewable energy is sourced from a portfolio of large-scale wind and solar generation assets. We blend our supply and create customised energy products based on your company's energy consumption profile.

We deliver Green Energy to your business over the existing electrical network (The Grid) via the process known as Wheeling.

## What is Energy Wheeling?

Wheeling, also known as "Power Wheeling" or "Electricity Wheeling" is the transportation of electrons from one location, through the national power grid, to another location. Wheeling is essentially a financial transaction whereby Eskom electrons are swapped out with renewable energy electrons supplied by Apollo Africa through the use of a Power Purchase Agreement (PPA).

## What is a PPA?

A Power Purchase Agreement (PPA) represents a contractual agreement between Apollo Africa and a commercial electricity buyer. Under the agreement, the business commits to buying a specific quantity of electricity from a renewable energy generator, such as a wind or solar farm.

# How Wheeling works with Apollo Africa

## Generate

- Renewable energy is produced in wholesale quantities by a portfolio of tier 1 wind and solar generators in high-yield locations across South Africa.

## Grid Dispatch

- Each generator signs a Use-of-System Agreement (UoS) or Wheeling Agreement with Eskom which governs its connection to the grid.
- Renewable energy is introduced into the grid directly at the point of production which Apollo Africa measures with a Digital Smart Meter.

## Deliver

- We blend our renewable energy supply to create customised energy products suited to every business.
- Monthly reconciliation and nominated renewable energy supply is credited to your company electricity account according to what has been allocated to your business through our power purchase agreement (PPA).

## Results

- Your renewable energy credits will appear on your regular monthly electricity bill.
- This covers the Peak, Standard, and Off-Peak energy that we have allocated to you.

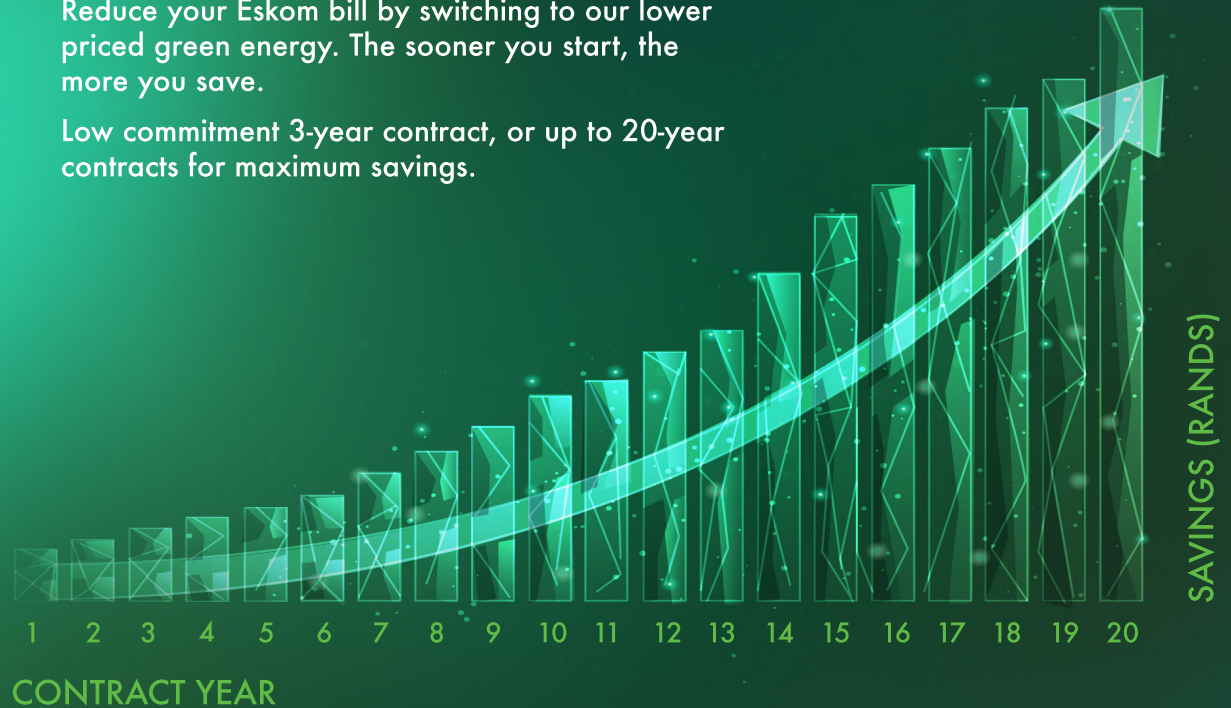

Expertly sourced, seamlessly delivered.

# Switch on savings, now.

Reduce your Eskom bill by switching to our lower priced green energy. The sooner you start, the more you save.

Low commitment 3-year contract, or up to 20-year contracts for maximum savings.

**Green Energy.**

# Introducing... **Project Hendrina**

Project Hendrina is one of the most commercially ready, utility-scale wind projects on the South African market. It offers 210MW of renewable wind energy available exclusively from Apollo Africa.

- Full grid access for this project has now been granted.
- This development introduces significant environmental and social impact benefits in the areas of water saving, carbon saving, job creation, and human health.
- The project site is in Mpumalanga, approximately 20 km away from Hendrina coal-fired power station, and will connect to the Hendrina Main Transmission Substation at 132KV.
- Wind provides 24/7 green energy, allowing for maximum energy savings and carbon footprint reduction.

**Sales now open.**

# We're proudly part of the Reunert Group

Apollo Africa proudly forms part of the Reunert group companies. Reunert, an industrial group with a portfolio of businesses in Electrical Engineering, Information and Communications Technology

segments was founded in 1888 and was one of the first companies listed on the Johannesburg Stock Exchange in 1948 alongside the early banking and mining institutions of the time.
